It's the scale that first amazes the visiting Easterner about the coast of northeast Oregon. What seems close is actually far away. The beach is so wide and flat that even large groups of people look insignificant on it. Words like "dramatic" and "striking" don't seem powerful enough to describe the impression created by this unexpected landscape.

This is a place of striking contrasts. On this summer morning it's calm. In the winter, though, the Pacific Ocean rages so violently and advances so far that it casts rocks as big as automobiles up onto the land.

The immense sea stacks, some as tall as skyscrapers and with names like Haystack and Needles, were once headlands. They appear solid and substantial. But they're also the fragile outer expressions of deep and powerful tectonic pressures that are just waiting for the right trigger to set in motion a great geological reset.
